

Diamond Anvil Cell Holder 670.5

With a diamond high pressure cell (DAC) Diacell Bragg-(S) supplied by easyLab Technologies Ltd., it is possible to investigate powder samples at high pressures of up to 70 GPa.

For the precise positioning of the cell on the 670 housing, a special mount was developed. Using the IUCr-ACA normed thread, the high pressure cell can be easily mounted after precise adjustment with the supplied microscope.
