

Collimators series 3050

X-ray collimators are pinholes which enable the generation of point-shaped beam cross-sections with lowest possible divergence.

The collimators are available with inside diameters from 0.05 to 3.3mm.

Special versions with rectangular holes are also available.

The collimator length is arbitrary.

	Type	Length [mm]	Inner diameter [mm]
3051	Collimator	up to 187	0.05 to 3.3
3052	Collimator	up to 217	0.05 to 3.3
3053	Collimator	over 217	0.05 to 3.3
