

X-ray generator

As standard, the X-ray generator comes equipped with:

- base unit ID 3003 as a 19" module with integrated high voltage generator
- cooling water control
- 1 water pipe (ID3003-tube hood), standard length 2m
- 2 water pipes (inflow and outflow), standard length 5m each (max. 20m*)
- computer interface RS 232 C
- 20 mA current loop (with optional adaptor)
- RS 422 / 485 (with optional adaptor)

* pipes above 5m in length require a special diameter in order to minimise pressure loss

High voltage generator

Max. output voltage:	60 kV direct current
Max. output current:	80 mA
Max. output power:	3.5 kW
